WORK EXPERIENCE

Technical Lead, AI & Platform

Nov 2025 – Present

Farmio

Singapore (Remote)

- Own architecture and delivery for Farmio's Singapore and Hong Kong platform, which surpassed 826K pageviews from 2,600+ users by August 2026 across ordering, inventory, fulfillment, invoicing, payments, analytics, and AI-assisted operations.
- Delivered an S&F invoice workflow representing SGD 35K+ in modeled annual value across finance capacity, support interruptions, late-submission penalties, and financing costs; processed 300+ PDFs in under 30 minutes and completed a crash-free 514+ PDF bulk export.
- Strengthened billing and audit controls across Singapore and Hong Kong by migrating 85K+ historical invoices and coordinating a pricing cutover across 5 revenue-facing systems.
- Modeled SGD 35K+ in annual security-review capacity—one-quarter of a Singapore cyber-risk specialist—by embedding SOC 2-aligned access, approval, review, and recovery controls across 20+ high-risk AI operations.
- Scaled WhatsApp Ordering AI and Kokopilot and built the Eve supplier agent across 150K+ LLM generations; caching 500M+ input tokens cut read pricing by 90%, representing US\$2.25K in modeled gross input-cost avoidance at regular rates.
- Modeled SGD 55K+ in annual engineering capacity by removing 6.4 engineer-hours per release at a 16-release/month planning cadence; automated rollback-safe AWS delivery and observability across 6 services to reduce release-related outage exposure.

Senior Software Engineer

May 2024 – Oct 2025

Farmio

Singapore (Remote)

- Modeled SGD 110K+ in annual real-time-feature capacity by teaching and standardizing Convex, cutting representative implementation from 3 weeks to 2–3 days.
- Owned delivery across 10 operational domains as Farmio expanded from 1 to 2 markets—Singapore and Hong Kong—working with 4 business functions: product, operations, finance, and commercial.
- Modernized the WhatsApp AI runtime, reducing production incidents from 3–4 per month to zero over subsequent months, cutting response time from 2–3 seconds to under 1 second, and accelerating AI feature delivery 2–3x.
- Standardized 30+ reusable interface components, cutting new-screen delivery time by 25–50% and custom CSS work by 60–70%; separately consolidated 2 duplicate pre-release runs into 1 per change to reduce cloud waste.

Software Engineer | Full-Stack & AI Systems

Jul 2023 – May 2024

Farmio

Singapore (Remote)

- Built Farmio's first OpenAI-powered WhatsApp order-intake workflow, providing 24/7 availability; equivalent continuous human coverage would require 3.8 full-time schedules and SGD 152K in annual base pay.
- Standardized 7 supplier/admin onboarding workflows and expanded digital ordering through 5 core mobile journeys spanning cart, checkout, review, drafts, and order details.
- Secured 3 portals by closing a high-priority authorization flaw that let supplier sessions view or change 4 sensitive admin areas—orders, categories, invoices, and payments.

Full Stack Engineer as Research and Development Staff

Aug 2021 – Aug 2023

Bina Nusantara University

Jakarta

- Scaled university platforms to 500 concurrent and 2,500 average daily users while cutting deployment time by up to 70% and server response time by up to 5 seconds.
- Built operational workflows used across 20 laboratories by 300 users, improving internal efficiency by up to 25%.

Full Stack Engineer

Sep 2021 – Jul 2022

Bina Nusantara University

Jakarta

- Built a thesis-administration platform for up to 500 users, cutting approval processing time by 30%; added PHPUnit coverage that reduced post-release issues by 40%.

EDUCATION

BINUS University

2019 – 2023

Bachelor of Computer Science in Information Systems

Jakarta

TECHNICAL SKILLS

Languages, Frameworks & Data: TypeScript, React, Next.js, Effect, Elysia, tRPC, PostgreSQL, Convex

AI & Platform: OpenAI, AWS, OpenTofu, Redshift, Metabase, OpenTelemetry, CI/CD
